New technology guarantee the best quality

To look at the beginnings of WAMATEX we need to go back to the year 1992.

From the company's very beginnings, our primary objective was to manufacture and sell a broad range of high-quality woven and knitted fabrics. We achieve these goals through an ongoing implementation of the latest methods of production and management, in step with the global developments in our field. We conduct our business activities expansively. Thanks to an experienced team of salespersons, our export department progressively introduces our products to foreign markets, resulting in our current position as the leading Polish manufacturer of and technical knitted fabrics made out of cotton polyester and mixed materials, as well as technical woven fabrics and woven fabrics for furniture.

The main branch of the company's activities involves the production of knitted and woven textiles. We also manufacture bed-clothes. Through the introduction of advanced technologies, we have managed to expand our stock of machinery with new items. Therefore, we now have the possibility to apply non-typical end-use finishes and to coat knitted fabrics with a variety of laminates. The laminated knitted fabrics and our new, exclusive product with skin care and anti-allergic finishes can revolutionise the markets both home and abroad in terms of the client's comfort and aesthetic needs.

We set high standards for ourselves and constantly raise our qualifications, creating an environment which stimulates the improvement of organisation and work efficiency. The worker's knowledge of QA rules, their participation and engagement in their work constitutes our credibility, competitiveness and as a consequence, contributes to our further development.

realisation of non-typical orders
stock of modern machinery

technology

By virtue of our experience, we have created a stock of technically advanced machinery, which allows us to meet the requirements of the market which involve superior quality and new designs of woven and knitted textiles. Our constantly increasing technological and manufacturing capabilities also enable us to manufacture knitted fabrics using specific patterns requested by clients.

In order to provide you with the perfect product which meets the highest standards of quality, we have created an extensive and well-developed production branch. Our weaving and knitting plants, a dyehouse and a finishing plant allow us to manufacture the complete product entirely in our own factory. Our extensive stock of machinery guarantees the highest parameters of our products. Our own dyehouse and a group of qualified technologists ensure that dyeing is performed according to high standards of quality.

After passing QA, the knitted fabric is stabilised, which gives it its final parameters and properties. The completed material is then transferred to the final QA department of the production stage, where the material undergoes thorough testing with regards durability, softness and the equal distribution of the dye. A fabric which has been tested and accepted for sale is then delivered to the warehouse for completed products, where it is stored in adequate conditions.

The production is supervised by a specialised staff, whose main objective is to satisfy your needs by creating high-quality products, which is confirmed by multiple certificates.

We always put the needs of our clients first.

textile laminations

superior quality innovative technologies

In order to meet market expectations, we have introduced textile laminations into our offer with the help of EU funding received from the program aimed at increasing competitiveness of companies through the implementation of new technologies. In order to meet your expectations, we are now able to laminate all knitted fabrics in our offer. The scope of possibilities offered by our know-how enables us to create superior-quality products. Advanced technology of gluing using a reactive glue adhesive allows us to join materials with a high resistance to heat. The unquestionable advantage of lamination using the innovative technology of gluing is that the amount of laminate does not decrease during the technological process.

Delicate

elastic

Breathing

higienic

Moisture proof

absorbent

Anti-allergic barrier

Highly resistant to washing and sterilisation

Textiles laminated with Techcoat breathing membrane coating form an effective anti-allergic barrier.

The breathing and moisture-absorbing woven and knitted fabrics are exceptionally delicate and extremely resistant to washing and sterilisation.

They can be easily applied in the medical, hotel and automotive industries.

Due to the use of polyurethane foam, Techcoat series of products is applicable in automotive and clothing industry, as well as upholstery.

The foam used for lamination is resistant to both high and low temperatures.

The diversity of the products in our offer ensures that they are perfectly suited for both everyday use and application in fields such as:

the medical industry

the food industry

the hotel industry

the automotive industry

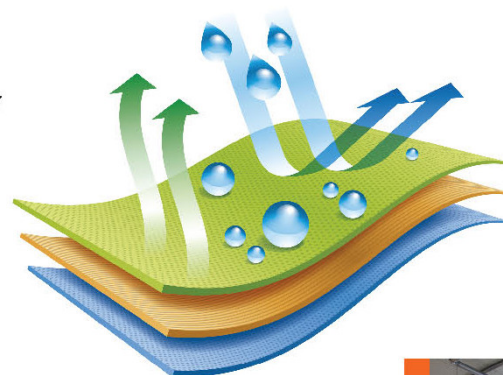

upholstery

the clothing industry

the underwear industry

the sports industry

the footwear industry

Laminated products
are perfectly suited for:
Hospitals and clinics
Hostels
Nursing homes
Public institutions
Pharmacies
Hotels

The possibility to create any pattern and colour
Stock of modern machinery
Possibility of registering patterns

Our offer includes dozens of products varying in source materials, weave, grammage and width. The finishing is applied according to the wishes of our customers.

Our yearly output amounts to over 3.000.000 m² of woven fabrics and 800.000 kg of knitted fabrics. By expanding our manufacturing capabilities, we constantly gain additional experience.

We would like to present to you our knitted terrycloth in the grammagerange of 90-290 g/m² and jersey fabrics in the grammage range of 110-180 g/m² with widths from 160 cm to 240 cm. Our palette of 48 basic colours will satisfy the requirements of even the most requiring clients. Additionally, we offer the possibility to make any custom colour.

Using our potential to its full extent, we have created our own laboratory, which enables us to develop our own formulas with the help of qualified technologists.

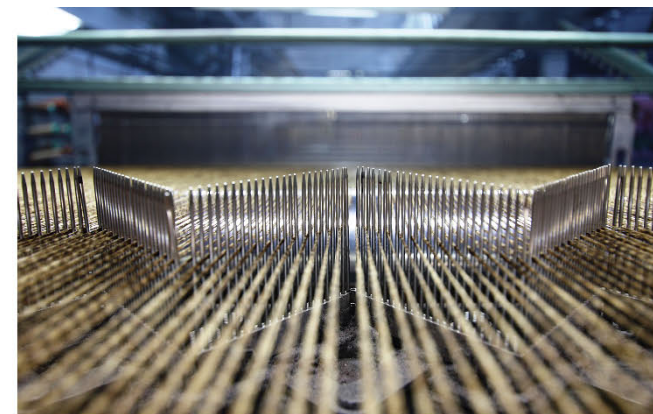

Additionally, we have the possibility of conducting QA tests such as:
Colour resistance to washing according to PN-ISO 105-C06 : 1996,
PN-EN ISO 105-E04 : 1999, PN-EN ISO 105-X12 : 2005
Metrological according to PN-EN ISO 6330 : 2002
and PN-EN 25077 : 1998

Piling resistance according to ISO 12945-2

Our modern machinery enables us to economise the colouring process, which in turn results in an exceptionally high efficiency.

experience

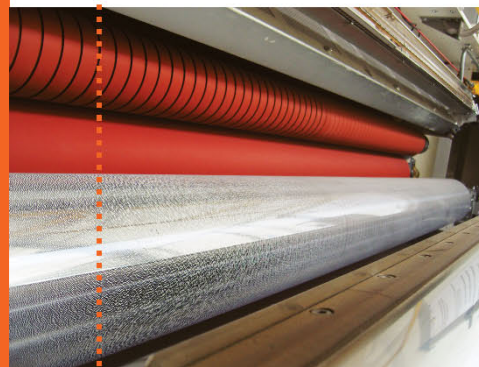

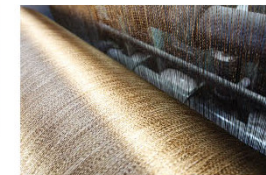

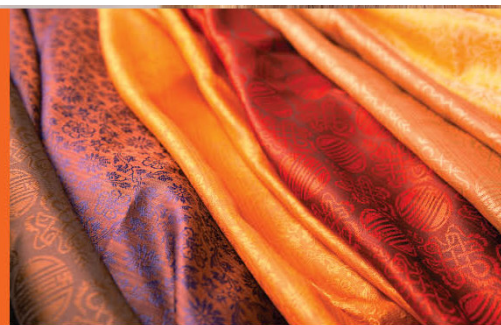

stock of modern machinery

Our stock of modern machinery enables us to manufacture fabrics of the highest quality, which is confirmed by the following certificates:

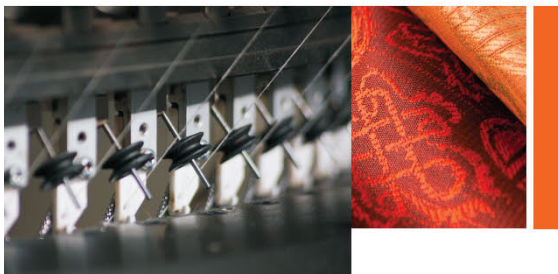

- "Human-friendly"
- "Safe for children"
- "Trustworthy textiles tested for harmful substances according to Oeko-Tex Standard 100"
- BRC Global Standard
- Q quality label
- ISO 9001:2008

In addition to the plain knit, we offer also printed knit fabric for bed sheets. Our regular offer includes over 50 printed patterns, we also let our clients actively participate in designing the pattern for the knitted fabric. We also provide the clients with the possibility to register the selected pattern.

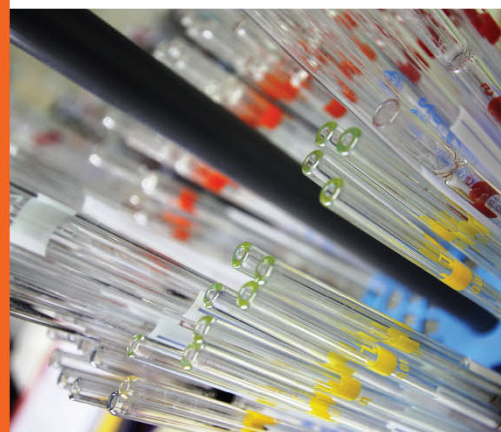

Home Decor Idea

carefully selected patterns
the latest trends

Our offer includes a large group of products with various jacquard patterns, weaves and print patterns in the most fashionable colour arrangements. The rich colouring and pattern designs are selected according with the individual needs of the clients and are being updated in accordance with the latest fashion trends. We offer more than 10 patterns for plain knit curtain fabrics and tablecloth weaved fabrics; we can also design custom patterns for specific orders by the client. Every tablecloth fabric is Teflon-coated, which provides additional protection against dirt. Thanks to our own dyehouse and laboratory, we can offer an unlimited colour palette to our clients. In addition to unicoloured knitted fabrics, our offer also includes transfer-printed knitted fabrics. Our basic catalogue of these fabrics covers 60 patterns and is updated every year with new patterns and current colourings. The print patterns for knitted fabrics are carefully selected according to the latest trends of the season.

Decorative textiles:
for curtains
for tablecloth

For special orders made by our most requiring clients, we can manufacture knitted fabrics with different grammages and design restricted patterns which will be made only for a single client. The colouring of the knitted fabrics also comes in a very wide variety. It is based on the catalogue of 45 colours, which can be freely modified. The dyehouse by the knitting plant and the finishing plant allow us to perform the entire production process by ourselves and to thoroughly control the quality of the products.

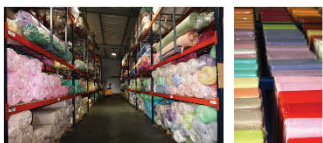

storing and logistics

know-how well-developed logistic system

Wamatex offers comprehensive service and supervision by specialists starting from the very beginning of the production process, through the storing system and up to the distribution to the client. Thanks to our know-how and experience, we can take pride in our excellent customer service and the quality of our products. Our company has separate warehouse spaces for yarn, raw knitted fabric, finished fabric and the end product. A well-developed logistical system dedicated to customer service enables us to offer free deliveries across Europe. Our modern vehicle fleet and our experience ensures that the wares are transported in adequate conditions. Moreover, the transported wares are insured up to the full value of the items. Your satisfaction is expressed by the increase in our sales, which is why we have developed excellent product rotation and implemented the FIFO rule. One major advantage of this method lies in the elimination of the negative effects of prolonged storage and improved control of our stocks.

staff achievements superior quality

Quality serves the purpose of achieving the strategic goal involving a positive economic outcome and competitiveness on the service market.

In order to ensure high quality, we have implemented QA rules in accordance with ISO 9001:2008, confirmed by the certifying unit of TUV Rheinland, Poland.

We also hold the international BRC certificate of quality issued by TUV NORD CERT GmbH. Our efforts to ensure the quality of our products were also recognised and confirmed by the German organisation Oeko-Tex Standard 100, which in 2010 awarded our company with the certificate "Trustworthy textiles tested for harmful substances according to Oeko-Tex Standard 100" through its plenipotentiary the Textile Research Institute appointed on 1st May 2010.

The certificates we have received are an obvious guarantee of our quality, which can be ascertained from the quality of our weaves and the durability of the cotton.

We have a well-trained managerial staff, which makes every effort to ensure that our products and production processes are innovative, provide superior quality and production costs that are low when compared to their price. We gain our insight into the needs and the absorptive power of markets through market analysis, which is used to develop the company's business activities.

Each of our clients is treated individually, and every order is completed with due precision.
